

Project goals

- Develop a family of HW/embedded SW components enforcing secure and trusted computing: TPM, MTM, TSS, Tokens
- Develop suitable trust concepts and architecture elements for all related application domains: computer, mobile, consumer
- Coordinate relevant European contributions related to Trusted Computing standards

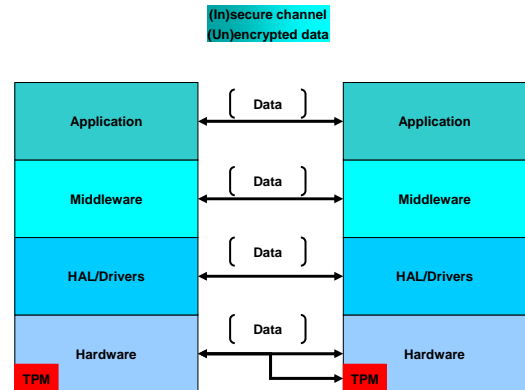

Economical challenges

Boost European production of home-made secure components

Technical challenges

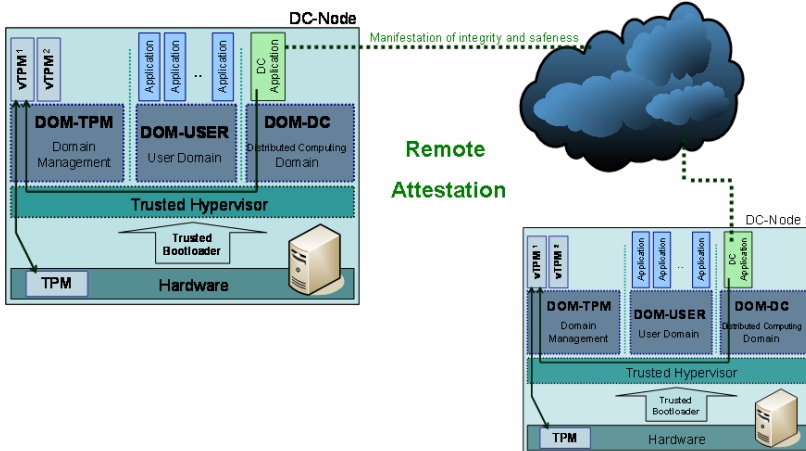

A- Interconnection of chains of trust

B- Privacy management

D- Distributed security challenge

C- Trusted Component Management
